WEBINAR 2019

13th May 11:00 A M IST

RGCB

DISCOVERIES FOR A
BETTER TOMORROW

Programming for Biologists

Today biologists need to analyze data which is too complex and/or huge to be done without a computer. The next generation sequencing has become cheap and very popular among biologists. The individual researchers and research groups have to answer questions specific to their area of interest using this data.

This webinar has been designed mainly for Bachelor/Master students but PhD students, Postdocs and Faculties with little or no programming experience can also apply. The only prerequisite for the course is a strong interest in learning programming for Biology. We would teach basic UNIX commands, some practical topics in bioinformatics, lot of coding examples and end with group coding projects.

The registration fee is only Rs. 500 to make sure that only serious candidates register for this event.

Speaker

Jamshaid Ali, PhD

Registration fee

Rs. 500
